

Solu-CAL AG

ENHANCED PELLETIZED LIME FOR PROFESSIONAL USE ONLY

Application rate requires four times less product than regular lime
Based on the University of Penn State's field trials 2008

- Solu-Cal® AG makes fertilizer application more efficient
- Adjust pH faster than with typical lime.
- Releases stored up nutrients tied up in the soil.
- Needed for cell division and formation
- Helps improve root growth conditions

- T.O.G.® an organic acid, is combined with pure fine-ground palletized limestone. When applied to soil, T.O.G.® converts the calcium in Solu-Cal® AG into a more soluble form, readily available for plant uptake or pH adjustment

- Solu-Cal® AG addresses both the calcium needs of the plant, as well as the growing media pH. Solu-Cal® AG will help achieve a uniform calcium profile throughout the growing media.
